EDUCATION BOT

This bot provides a service to connect people with teachers who give private lessons individually or in groups about different subjects. For this bot I have used MongoDB to store all the information about the teachers.
The performance is this:

- If we say hello, Hello, hi or Hi, the bot will answer with this:

> **Usted** 22:18
>
> hello

> **Education** 22:18
>
> Welcome to your personal private class teacher advisor!
> List of available options:
>
> - Available subjects: Subjects.
> - Available teachers for one particular subject: the name of the subject, for example: english.
> - Filter by type of classes: individual or collective.

- If we want to see the subjects we type "Subjects"

> **Usted** 22:18
>
> Subjects

> **Education** 22:18
>
> The offered subjects are:
>
> - English
> - Spanish
> - Maths.
> - Chemistry
> - Physics.

- We can see the information about the teachers filtering by subjects. It works well typing the name of the subject with the firts letter as a Capital letter or not.
